Diabetes mellitus (sometimes called "sugar diabetes") is a condition that occurs when the body can't use glucose (a type of sugar) normally. Glucose is the main source of energy for the body's

cells. The levels of glucose in the blood are controlled by a hormone called insulin, which is made by the pancreas.

1) Type 1 Diabetes Mellitus is classified by a deficiency of insulin in the blood. The deficiency is caused by the loss of insulin-producing beta cells in the pancreas. This type of diabetes is found more commonly in children. An abnormally high or low blood sugar level is a characteristic of this type of Diabetes.

2 Diabetes Mellitus Paper Type 1 Diabetes Mellitus Lack of insulin causes type 1 diabetes since the pancreas unable to produce insulin. The inability to produce insulin is due to the immune system of the body attacking the beta-cell inside the pancreas that produces insulin. The immune system destroys the cells rendering the pancreas unable to produce insulin.
