RPM's Engine prelube is an engine pre-lubrication system that reduces engine wear by automatically building engine oil pressure before the engine is allowed to crank.

Use of the engine PreLub™ system will significantly reduce key engine component wear resulting in considerably longer engine life and lower operating costs. PreLub™ Key Benefits: Eliminate the Danger – Removes the danger of starting the engine with no oil; Protect Bearings – Guards bearings during cold weather or hot climate starts

Open the "Tools" menu at the top and select "Internet Options". On the "General" tab, select "Languages". By using the buttons on the right, you will

be able to add/remove/change your language options. After you make the change, close all the dialog boxes, close your browser, and open a new browser.

When the engine is running the solenoid valve on the Insta-Lube Kit remains open and the engine oil pump refills and pressurizes the accumulator tank. The Solenoid valve closes when the key is turned off, and the stored in the accumulator making it ready for your next startup. The Insta-Lube Industrial-Prelube Kit Works On All:

The Keith Eickert Engine Pre-Luber System was designed to help eliminate one of the most damaging occurrences that takes place in a performance engine; "Cold Start Scuffing".

The prelube pump builds pressure in the engine's lubrication system. When the pressure switch for the prelube system closes as a result of the increased pressure, the ECM input for the pressure switch is taken low. The ECM then knows that the pressure in the system is adequate. The ECM will begin the starting sequence.

RPM's prelube is an engine pre-lubrication system that reduces engine wear by automatically building engine oil pressure before the engine is allowed to crank. With the life of your engine in mind, our engine protection products eliminate the wear and tear associated with dry starts and hot shutdowns.

The number of times the engine will need to be started in its lifetime, and the cost of replacing/rebuilding the engine (including equipment downtime), against the cost of adding the prelube system. As an example, a good prelube system may run in the range of \$1500 by the time it is installed.

The Problem: All engines suffer from accelerated wear as a result of periodic dry starts especially today's high performance, fast starting diesels. No engine is immune. Dry starts can occur in severe hot or cold weather, after prolonged shutdowns or following routine oil changes.

Proper lubrication is critical to successful engine operation. The lubrication system of a modern engine accomplishes three primary purposes: It lubricates surfaces to minimize friction losses. It cools internal engine parts that cannot be directly cooled by the engine's water-cooling system. It cleans the engine by flushing away wear particles.

Pre-lube pumps can also work as oil change assist pumps by simply adding a 3-way valve to discharge used oil for faster oil changes. Paragon's pre-lube pumps are engineered for 10 years' service on locomotives and large diesel engines. Our AESS (auto engine start stop) soak-back pump is upgraded for this extreme level of durability.
